AN/FRT-6

RADIO TRANSMITTING SET

AN/FRT-6

Radio Transmitting Sets AN/FRT-6 and AN/FRT-6A are long-range, h-f transmitters having an output power of 40 kw for on-off radiotelegraph, frequency-shift telegraph or teletypewriter, and facsimile transmission. They are capable of keying speeds up to 400 wpm on either c-w or frequency-shift emission.

These sets provide 10 preset, crystal-controlled channels and have a stabilized variable frequency oscillator. They are designed for optimum operation into an antenna with an impedance of 600 ohms.

The transmitters may be operated without using the main r-f amplifier section of the equipment to provide a 15-kw output (instead of the normal 40-kw) for operation to medium distances or for emergency use.

The power tubes are forced-air cooled. Power for the blowers is obtained from a 230-v transmitter supply.
