RADIO TRANSMITTER ASSEMBLY	

Radio Transmitter Assembly OA-60/FRT is a high-power, a-m (cw), single side band, high-frequency radio transmitting equipment used for point-to-point long range communication applications at large fixed stations.

This equipment consists of an assembly of operating units and components rack and panel mounted in floor-type cabinets, and includes high-voltage rectifier, r-f exciter, r-f power amplifier sections, and water cooling, crystal-control, and related accessory and auxiliary items.

It can be used with a single-side band transmitter as a linear amplifier, controlled by six different crystals, and provides a single preset operating channel.

It is used for high-speed cw, and for radioteletype communication and can be controlled locally, or from a remote operating site, by appropriate remote control equipment.

Uses a 600-ohm transmission line operating into a rhombic antenna array, has a power output of about 40 kw and operates from a 100-kw source of 230-v, 3 phase, ac.
