 RADIO TRANSMITTING EQUIPMENT

Radio Transmitting Equipment TBK-1 and -11 are shore-based a-m (cw) radiotelegraph transmitters for h-f communication. TBK-11 is capable of vacuum-tube keying speeds up to 500 wpm, as well as relay keying of 100 wpm or better. Provisions are made in both equipments for variation from full-power to low-power operation of 75 w.

This transmitter uses master oscillator control and is continuously variable over its frequency range.

Remote control is provided over a two-wire landline up to 50 miles. Local operation from the transmitter panel is usually reserved for test purposes.

A power-transfer panel is used at the TBK-11 for manually switching the transmitter input from one motor generator set to the other. The two motor starters used obtain operating power from the transmitter control circuits.

It may be operated on any one of four power sources.
